MEMORANDUM FOR:	Deputy Director of Central Intelligence	
VIA:	Director, Intelligence Community Staff	STA
FROM:	Director, Office of Planning	STA
SUBJECT:	Machine Assisted Translation - Japanese to English	
1. There is a growing backlog of untranslated Japanese scientific and technical material. FBIS has recognized the problem for some time and is in the process of expanding the number of staff and contract positions devoted to the problem. They have, however, had considerable difficulty in recruiting Japanese linguists with the required technical qualifications. Based upon a review of current on-going and related activities, we believe a machine assisted translation procedure would serve to reduce the current backlog and aid in maintaining the required throughput. We should note however, that the final product will be "analyst quality" translations and will not produce the "general reader" quality required for wide-scale distribution.		
(draft attached) capability. We the DDS&Ts' Offi procedure) and be the ultimate cost development enhancement requ	in the process of preparing a production enhancement proposal to develop a machine-assisted Japanese-to-English translation have had discussions with	STAT
